Overview

Snapdragon: AI Unplugged Hackathon – Limerick

April 11 – 12, 2026

Location: University of Limerick

Computer Science & Information Systems Building

Plassey Park Rd, Sreelane, Limerick, Ireland

V94 NX93

Target Platform: Copilot+ PC powered by Snapdragon X Elite processor

Description

Join us for an exciting 24-hour Edge AI Hackathon where innovation meets cutting-edge technology! Teams of 4 participants will receive a Copilot+ PC powered by Snapdragon® X Elite processors to design and build an edge AI application using ONNX QNN EP that pushes the boundaries of performance and creativity.

What's in it for you?

- Prizes for the top 2 teams
- Awesome swag for all participants
- A chance to collaborate, learn, and showcase your skills in a high-energy environment

Whether you're passionate about AI, edge computing, or simply love building impactful solutions, this is your opportunity to shine.

Snapdragon and Qualcomm branded products are products of Qualcomm Technologies, Inc. and/or its subsidiaries.

Event Schedule*

- Day 1 - April 11
  - 10:00 | Check-in
  - 11:30 | Welcome and orientation
  - 12:15 | Hack begins!
  - 21:00 | Depart building

- Day 2 - April 12
  - 8:00 | Return to building
  - 13:00 | Project Submissions Due
  - 13:00-15:30 | Team Demos

- 15:30-16:30 | Judging and device return
- 16:30 | Winners announced
- 17:00 | Depart

*Exact times may vary

Logistics

- Meals, coffee, and refreshments will be provided throughout the event
- Teams may take their Qualcomm-provided laptop overnight as long as the Team Lead has signed and returned the Loaner Agreement.

Teams

- Teams of 4 developers
- One submission per team

Project Requirements

- Each team must submit a proposal for an edge AI use case application leveraging open source software that would run natively on a Snapdragon-powered laptop.
- Teams should build an AI application using ONNX QNN EP on Snapdragon.
- The proposal must be the work and/or idea solely owned by the team members.

Event Kick-off / Master Class

Event kickoff will include introductions from the sponsors and a master class - an overview of Qualcomm's AI Stack, recommended tools to use during the hack, and a brief walk through of a sample app.

Loaner Agreements

Each team that takes a device will need to complete a loaner agreement. One person from the team should fill out the form (name, home address, and signature) and return to a Qualcomm employee prior to receiving a device.

Mentors

2-5 industry experts will be onsite and available to help teams when they are stuck. Mentors are available to help teams stay unblocked and on track – not to build their project for them.

Team Demos

Each team will have 5 minutes to talk about and demo their application. They should highlight the technology used especially edge technologies.
Each demo will be timed and be held to only 5 minutes so each team is able to present.

Judging

We will have 2 winning teams. Judges will evaluate each application and score them based on the evaluation criteria below. Highest scoring application will win the Top Award and the team with the most peer votes will receive the Runner-Up Award.

We will have 3-5 judges for the event. Judges can also be mentors.

Evaluation Criteria

Submissions will be judged on the following criteria:

i. Technical Implementation (40 points)
   Evaluation based on resource utilization, optimization, latency and performance, and energy efficiency.
ii. Application Use-Case and Innovation (25 points)
   Evaluation through the lens of problem solving, creativity and uniqueness, and user experience.
iii. Deployment and Accessibility (20 points)
   Evaluation based on ease of installation and use.
iv. Presentation and Documentation (15 points)
   Evaluation based on the clarity of explanation during the presentation, and code quality and documentation.

Prizes

Top Prize (selected by judges):

- Bose QuietComfort Ultra Over-Ear Wireless Headphones (one for each member of the team)
- Qualcomm DevRel support to complete application
- Blog + Live Stream opportunities

Runner-Up (team peer vote):

- OnePlus Watch for each team member of the winning team (one for each member of the team)
- Qualcomm DevRel support to complete application
- Blog + Live Stream opportunities

*The Top Prize winner cannot be the Peer Vote award winner

Project Submission Requirements

To be considered for the prize, your submission must meet the following basic criteria:

i. The application shall not include any closed-source existing code; all codes shall be open for consumption and available to the public.
ii. The application must be provided in a GitHub repository, with the following files in addition to your code:

1. A README file with the following information:
    a. An application description;
    b. Names and emails of all Eligible Individuals on the Team;
    c. Setup instructions from scratch, including dependencies if applicable;
    d. Run and usage instructions; and
2. An open-source license (please refer to https://choosealicense.com for help choosing).

iii. The application must be runnable using your provided instructions.
iv. The application and most components must run on the edge (hybrid edge/cloud is acceptable, but the majority should run locally on device).
v. The application must use ONNX QNN EP on Snapdragon X Elite.
vi. The application must be capable of being successfully installed and run on the Platforms for which it is intended and must function as depicted in the text description.
vii. The application must be developed and/or commercially ready to the extent that it may be deployed on app store or other open source platform for users to download.
viii. The GitHub repository containing your application must be submitted by the Submission Period. Such GitHub repository must be submitted via Microsoft Forms. The link to the Form will be provided by Sponsor at the beginning of the onsite event.
ix. (Optional) – The following components are highly recommended but not mandatory:
    3. Tests and testing instructions to verify the app setup;
    4. Notes section containing additional information not covered in the application description;
    5. References used while developing the application; and
    6. Well-commented code.

Swag

Swag will be available for all participants.
