Home > All Models > **HRNetFace**

HRNetFace

Comprehensive facial analysis by extracting face features.

Detects attributes (liveness, eye closeness, mask presence, glasses presence, sunglasses presence) that apply to a given face.

Accuracy metrics

REFERENCE METRIC
0.034
NME

ON-DEVICE METRIC
0.034
NME
Samsung Galaxy S25

- High interference time
- Higher memory usage
- Middle throughput
- Higher amount of layers

CavaFace

Comprehensive facial analysis by extracting face features.

A PyTorch-based framework for training face recognition models that generates facial embeddings for verification and identification tasks

CavaFace

Snapdragon® 8 Elite Gen 5 Mobile Snapdragon 8 Elite Gen 5 QRD

INFERENCE TIME	THROUGHPUT	MEMORY USAGE	LAYERS
2.27 ms	441 inferences / s	0 - 92 MB	605 NPU

See more metrics

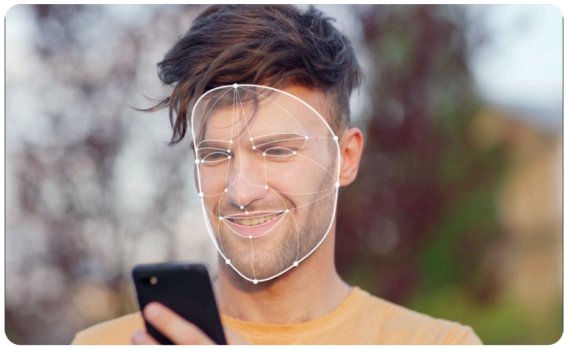
- MINIMAL interference time
- Low throughput
- High amount of layers
- Higher memory usage

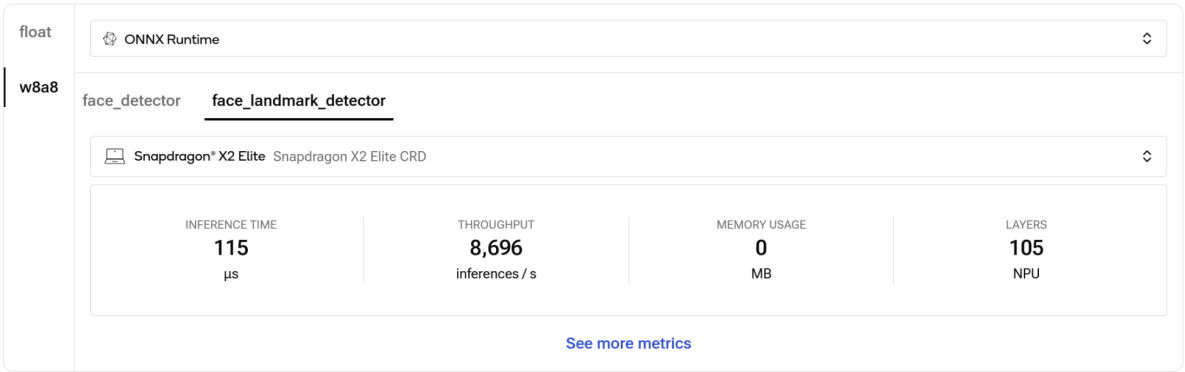
MediaPipe-Face-Detection

Detect faces and locate facial features in real-time video and image streams.

Designed for sub-millisecond processing, this model predicts bounding boxes and pose skeletons (left eye, right eye, nose tip, mouth, left eye tragion, and right eye tragion) of faces in an image.

Download Model





- Low interference time
- Highest Throughput
- No memory usage
- Low amount of layers

Usage:

- Background detection; blurring faces of people in background, identity protection.

Examples:

-child/family member walks into the background

-vlogging; blurs people walking by and logos of shops**
